## Introduction

The buddy bumpers create a physical barrier from the cutter. If a person is close to the Buddy Power Stick, the bumper will nudge them to ensure proper clearance and safety.

NOTE: When bumpers are installed, the powerstick can only be removed from the front side.

## Installing the bumpers

One of the bumpers has a notch cut into it. This bumper is the rear bumper.

Use  $\frac{1}{4}$ " allen wrench to install rear bumper (p/n 003301) onto rear side of powerstick with two screws (p/n 002018).

Use  $\frac{1}{4}$ " allen wrench to install front bumper (p/n 003300) onto front of powerstick with two screws (p/n 002018).
